## ***Reviews***

*It is really an remarkable ebook that we actually have ever read through. I actually have study and i also am confident that i am going to gonna study once more yet again in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.*

Not illustrated. 1862 Excerpt: .A E, ED, CD, considered separately, form a system similar to the arrangement in the preceding Fig., it follows that if the proper point d between D and E be taken, an additional parallel motion will be obtained; so that this form combines two parallel motions in one, and is commonly so employed in steam engines, by suspending the groat piston rod P F from F, and the air-pump rod Q d from d in the link E D. The position of the point d is found from the following formula,  $ED \cdot AE \cdot D = AE + ED$  (1) If the position of the point d be given, the length of the radius rod C D may be found by transposing the preceding formula, which gives  $OD, AB(ED + Dd)$  (2) When the lengths of the several parts of the parallel motion, as E D, A E, C D, are given, the distance D d may be readily found by formula (1); and when A E, E D, D d are given, the length of the radius rod C D may be found by formula (2). Note.--If the system of link-work in the parallel motion be moved into all the positions it is capable of taking, the actual paths of the points F and d would be found to be (since the extent of the stroke of the piston is small) in curves in the shape of the figure 8; but the small portions of the curves...
