Pearson Education (US), United States, 2004. Paperback. Book Condition: New. 226 x 185 mm. Language: English . Brand New Book. Starting with simple examples, you ll see how the multi-user, local area network applications that Visual FoxPro developers are used to building are constructed in Visual Basic . You ll learn how to use Crystal Reports to build reports like the ones you build in FoxPro. You ll discover how to use DataAdapters and datasets instead of DBFs. You ll see examples of the paradigm shift that client-server programming imposes, and why solves that problem (even when you wouldn t need to solve it in FoxPro.) And you ll learn how to give your FoxPro and Visual Basic applications smart client remote data access. You ll understand how to begin the construction of a database project in Visual Basic with a container form and a MainMenu instead of using Screen and MSYSMENU. You ll learn how variables are declared and used; how menus are controlled; how to use events, and why you have to use events in VB when they re unnecessary in FoxPro. You ll learn how to build inheritable forms, Visual Basic s answer to FoxPro s form class templates, to reduce programming to a minimum. You ll learn why properties are like variables in FoxPro, but more like functions in VB. And you ll learn where Visual Basic adds features that you didn t have in FoxPro and didn t know that you needed. You ll learn where to look for all of those FoxPro commands and functions that you need. And in case you haven t yet used SQL Server with FoxPro, the examples will demonstrate how it s done first in FoxPro, then in VB . * Shows how to build a typical application in...
